High

1. Activity of the Enterprise

Almaden Morocco is part of the Almaden Group (China), which specializes in the production of glass for solar panels and solar panels.

The company manufactures mono and polycrystalline, bi-glass solar panels.

Almaden focuses on the development of special technologies for the creation of ultra-thin glass-glass solar modules. By combining tempering technology with a unique solar module concept, the panels have a longer lifespan and higher electrical yields.

Based in Al Hoceima, the production line, which started up in 2018, has a capacity of 250 MW.

The 7,000 m² plant is equipped with a high-performance, European-certified production line for the production of high-quality glass-glass modules. Each module is made from glass that is thermally tempered on both sides, for high resistance to different climatic conditions, including snow-covered regions.

Point to be precised: Percentage of local value added?
